Karim Ismail

Systems Engineer/Hadoop Developer

karim.ismail@email.com | +20 101 234 5678 | github.com/karim-ismail | linkedin.com/in/karim-ismail | karimismail.com

Education

Gujarat Technological University
Bachelors of Engineering — January 2016, Ahmedabad, India

Experience

Systems Engineer/Hadoop Developer — Full-time - On-Site
Tata Consultancy Services — Feb 2016 - Jan 2018, Cairo, Egypt

- Collaborated with an American pharmaceutical client, a premier biopharmaceutical company, to leverage big data analytics for managing large volumes of United Healthcare data, including patient records, medicine information, and treatment pathways.
- Managed and operated a fully distributed Hadoop cluster (CDH3) with 20 TB capacity, comprising 10 Data Nodes, 3 Master Nodes, and NFS backup for NameNode.
- Developed and presented proof-of-concepts (POCs) for enterprise-wide Hadoop adoption, showcasing its potential for large-scale data processing.
- Leveraged SparkAPI within Cloudera Hadoop YARN to execute advanced analytics on extensive healthcare datasets.
- Performed comprehensive cluster maintenance, including node management, monitoring, troubleshooting, data backup management, and log file analysis to ensure optimal performance.
- Facilitated efficient data ingestion and extraction by importing and exporting large datasets between relational databases and HDFS using Sqoop.
- Developed complex Pig scripts for data transformation and created Hive reports for business intelligence and data visualization.
- Implemented Hive partitioning and bucketing techniques to optimize query performance, creating both external and internal Hive tables, and monitored Hadoop scripts for data loading into Hive.
- Developed and optimized Spark scripts using Scala shell commands, working extensively with DataFrames, Spark SQL, Datasets, RDDs, and MapReduce paradigms.
- Collaborated cross-functionally with infrastructure, network, database, application, and Business Intelligence (BI) teams to uphold data quality and availability.
- Generated insightful reports using Tableau, facilitating data export to HDFS and Hive via Sqoop for comprehensive data analysis.
- Utilized ORC and Parquet file formats for efficient data serialization and Snappy for data compression, enhancing storage and processing efficiency.

Certificates

TCS Certified Hadoop Developer - Internal Certification, 2018

Awards & Honors

Appreciation for Articulate Leadership Qualities - Tata Consultancy Services, 2018

Skills

Big Data Technologies: Hadoop - Spark - Sqoop - Hive - Flume - Pig
Operating Systems: Linux (Ubuntu) - Windows 2007/08
Tools: Tableau - SVN - Beyond Compare
