

Amr Ahmed

Talend ETL Developer

amr.ahmed@email.com | +20 100 123 4567 |  github.com/amr-ahmed |  linkedin.com/in/amr-ahmed | amrahmed.com

Education

University of Mumbai

Bachelor of Engineering (BE)

January 2012 - January 2016, Mumbai, Maharashtra, India

Experience

Talend ETL Developer

Full-time

Tata Consultancy Services

February 2016 - January 2018, Mumbai, India

- Designed, developed, and maintained ETL mappings and data migration documents for seamless project transfer across development, testing, and production environments.
- Performed comprehensive Unit and System testing to ensure data load validation and resolved long-running job issues, optimizing data pipeline efficiency.
- Utilized Talend Big Data components (tJDBCConfiguration, tHDFSConfiguration, tS3configuration) and standard components (tMap, tJoin, tAggregate, tFilter) to create robust data integration solutions.
- Implemented ETL methodologies and best practices, developing complex Talend jobs, components, and Joblets, including parent-child job orchestration using tRunJob and context variables for environment flexibility.
- Created and managed physical database objects such as custom tables, views, stored procedures, and indexes in SQL Server, executing complex SQL queries and joins with MySQL.
- Developed Source-to-Target mapping documents for Fact and Dimension tables, including SCD Type 1 and Type 2 dimensions and incremental loading strategies, with a focus on performance tuning.
- Administered Talend Administration Console (TAC) for job scheduling, user management, and deploying Talend jobs both within and outside Talend Studio.
- Designed and implemented a Framework Integrated Job for automated scheduling, status updates, failure notifications, and performance enhancement through tParallelize and multi-thread execution.
- Managed file transfer operations using Talend FTP components (tFileList, tS3Put, tFTPput) to transfer files between servers and FTP destinations.
- Extracted and loaded data from diverse source systems (SQL Database, DB2, Flatfiles, XML) into staging and target databases, applying intricate business logic.
- Contributed to end-to-end ETL process design from various source systems to Staging and Data Warehouse, actively gathering and translating client business needs into technical requirements.
- Collaborated effectively in Agile environments, demonstrating strong problem-solving, time management, and communication skills with both onsite and remote teams.

Projects

Certificates

Skills

ETL Tools & Concepts: Talend Big Data - Informatica PowerCenter - Talend Administration Console (TAC) - Data Integration - ETL Methodologies - Performance Tuning

Databases & SQL: Microsoft SQL Server - SQL - Redshift - MySQL - DB2 - Microsoft Access - Data Warehouse Concepts (Star Schema, Facts, Dimensions) - Data Modeling

Cloud Big Data: AWS Services (S3, Athena) - HDFS

Programming Tools: Microsoft Visual Studio - Java - Agile Methodologies - FTP
