

Fatma Gamal

Cloud Operations Architect (DevOps)

fatma.gamal@email.com | +20 101 234 5678 |  github.com/fatma-gamal |  linkedin.com/in/fatma-gamal | fatmagamal.com

Education

Symbiosis Institute, Pune, Maharashtra, India

Post Graduate Diploma Information Technology

January 2013

Pune University, Pune, Maharashtra, India

Bachelor of Engineering Electronics and Telecommunications

January 2007

Experience

Cloud Operations Architect (DevOps)

Full-time - On-site

DevOps

January 2014 - Present, Cairo, Egypt

- Managed Tibco Spotfire enterprise & Cloud Product support, encompassing AWS Cloud and Azure Cloud platforms.
- Instrumental in recruiting and building an entire team of 15 members, fostering growth and integration into multiple projects.
- Simultaneously managed 4 distinct projects/products, effectively integrating new team members into these initiatives.
- Oversaw Tibco Spotfire Enterprise & Cloud environments, ensuring optimal performance and availability.
- Collaborated with the India QA team to facilitate pre-production environment setup for comprehensive testing.
- Coordinated production deployments and hot-fixes, ensuring seamless releases and minimal disruption.
- Led technical teams, providing guidance and managing project workflows for 4 concurrent projects.
- Organized and conducted workshops on new AWS services to upskill and enhance the entire team's expertise.
- Developed shell scripts to automate the extraction and shutdown of AWS running instances, optimizing resource utilization.
- Wrote shell scripts to identify and release free Elastic IP (EIP) addresses, improving cost efficiency.
- Implemented Lambda functions to trigger critical scripts, enhancing automation and operational responsiveness.

Administration, Automation & Monitoring Specialist

Full-time - On-site

Synechron Technologies Limited

April 2011 - December 2013, Giza, Egypt

- Managed Linux media server farms and provided comprehensive application support.
- Executed patching for Linux physical and Xen virtual machines, ensuring system security and stability.
- Created and managed Satellite channels on Red Hat Satellite server for efficient software distribution.
- Implemented automation solutions via shell scripting and provided robust MySQL database support.
- Diagnosed and resolved issues within customized applications, ensuring continuous operation.

Development, Automation & Monitoring Engineer

Full-time - On-site

Tsys Limited

April 2009 - March 2011, Alexandria, Egypt

- Provided secure access to users on Red Hat Directory Server (RHDS), CVS, and dot project servers.
- Managed user access on development and production VDI (Virtual Desktop Infrastructure) servers.
- Handled MySQL database administration and utilized shell scripting to automate routine tasks.
- Conducted requirements analysis and planning for project environments and access protocols.
- Implemented MySQL replication across Linux servers to ensure data redundancy and high availability.
- Fine-tuned existing applications for improved performance and efficiency.
- Performed thorough testing and debugging of scripts to identify and rectify errors.

Senior System Engineer

Full-time - On-site

Patni Computer Systems Limited

February 2007 - March 2009, Cairo, Egypt

- Served as a Senior System Engineer for the CPI Maintenance Project, supporting Genworth Imaging Solutions.
- Provided L1 engineering support, monitored P8 FileNet application, and managed user-raised tickets.

- Administered 10 Linux Proxy servers and MySQL servers, ensuring system stability and security.
- Implemented MySQL replication for critical systems and monitored user site visits and data downloads.
- Prepared complex SQL queries for client users and managed Oracle database operations.
- Tested and deployed insert, select, and update queries to production environments.
- Handled and resolved bugs reported by users, ensuring application integrity.
- Ensured proper functioning of customer applications (e.g., eProcess, Trexo) and customized FileNet instances.
- Developed and deployed a shell script to automate the deletion of logs older than five days on Production servers.

Projects

CPI Project (Genworth Imaging Solutions)

February 2007 - March 2009

- Maintained and enhanced applications within Genworth Imaging Solutions, processing scanned insurance documents.
- Managed the storage of information in an Oracle Database and images in P8 FileNet.
- Developed and maintained multiple applications for generating reports to be sent to providers.

Skills

Cloud Platforms: AWS (EC2, RDS, CloudFormation Template, Lambda, Dynamo DB, Cloud Watch, Auto-scaling, Elastic Beanstalk), Azure

DevOps & Automation: Shell Scripting, Python, Automation, Puppet, CI/CD, Appdynamics

Operating Systems: Linux/Unix, IBM AIX, Windows

Databases: MySQL, Oracle, SQL, Dynamo DB

System & Application Management: P8 FileNet, RHDS, CVS, VDI Servers, Tibco Spotfire (Enterprise & Cloud)

Methodologies: Solution Architecture, DevOps, Administration, Application Support, Troubleshooting

Web Technologies: HTML
