Education

Pune University

MCS

January 2018, Pune, India

Experience

Database Administrator

Infinetworx Omnichannel Pvt. Ltd

Sept 2017 – Present

- Created tablespaces and planned data location, monitoring tablespace growth periodically.
- Implemented and maintained replication setups for databases.
- Managed database schema changes, moving them to stage environments.
- Provided DBA support and query resolution.
- Created users and assigned specific privileges as per requirements.
- Performed comprehensive database management tasks.
- Executed database recovery operations and managed data file relocation.
- Planned and implemented backup policies, performing Backup/Recovery of databases based on criticality.
- Handled IMPORT/EXPORT operations for data migration and replication.
- Designed and implemented database schemas.
- Provided 24/7 support to resolve database performance issues, job failures, sessions, and diagnose root causes.
- Installed, configured, and updated Oracle server software and related Oracle products. Also installed, configured, and updated MySQL, SQL Server, MariaDB, and MongoDB.
- Supported multiple databases and administered large Oracle Databases for production, development, and test setups.
- Maintained tablespaces, data files, control files, and online redo log files.
- Created users, granted roles and privileges, and managed tablespaces for different users by granting quotas on default and temporary tablespaces.
- Performed Oracle RMAN Backups, including scheduling for day-wise backups.
- Implemented incremental, cumulative, and full RMAN backups for each database for space management and effective recovery.
- Performed logical backups using Export & Import/Datapump Export of important tables at regular intervals.
- Regularly checked trace files, alert logs, and all ORA errors for potential issues.
- Resolved incidents related to user creation/deletion and backup failures.
- Checked Listener Status, performed connectivity troubleshooting, and fixed database listener issues.
- Monitored for new alert/error log entries/errors and analyzed details in trace files generated. Executed DDL & DML scripts as per customer requirements.
- Contributed to project documentation and generated daily reports.
- Ensured compliance to quality norms and took steps for any non-conformance. Spearheaded complete project activities ensuring timely completion.
- Implemented security policies on different database systems with granting and revoking privileges to users.
- Followed change management processes and participated in related meetings.
- Verified all instances/DBs were running, tablespaces were online, and monitored background processes and status.

Skills

Databases & Tools: Oracle (DBA, 10g, 11g, RMAN), MySQL, MariaDB, PostgreSQL, SQL Server, MongoDB, SQL, Putty

Database Administration: Replication Setup, Tablespace Management, User & Privilege Management, Backup & Recovery, Import/Export/Datapump, Schema Definition, Performance Monitoring & Tuning, Listener Troubleshooting, DDL & DML, Security Policies, Change Management

Operating Systems & Methodologies: Windows, Linux, Project Documentation, Mentoring
