## Education

---

### B.E. Computer Engineering

Mumbai University

Mumbai, Maharashtra, India

## Experience

---

### Database Administrator (DBA)

Full-time - On-site

Marketplace Technologies Ltd (Client: BSE Bombay Stock Exchange)

Feb 2017 - Present

- Administered mission-critical databases for projects including EBoss, Datafeed, MFDB, RTRMS, and IndiaINX, ensuring high availability and performance for Asia's fastest stock exchange.
- **PostgreSQL Administration:**
- Managed Redhat Linux OS Clusters with PostgreSQL for High Availability (HA) using Pacemaker, ensuring continuous operation.
- Collaborated with Development and Linux teams, providing database expertise and support throughout project lifecycles.
- Successfully implemented new database releases into production environments.
- Installed and configured PostgreSQL from source or packages on Redhat Linux servers.
- Performed comprehensive PostgreSQL server management, including Backup & Restore, Configuration, Role management, Blocking resolution, Tablespace creation, and troubleshooting.
- Partnered with the Storage team to establish Disaster Recovery (DR) setups on SAN using EMC technology.
- Configured LDAP and GSSAPI authentication for PostgreSQL, integrating Windows and Linux environments.
- Implemented logical replication for database servers, hot standby PostgreSQL servers, and optimized backup methods including schema, tablespace, and PITR using base backups.
- Optimized database performance by configuring maximum connections on Linux servers.
- Installed and configured `tds_fdw` from source for linked servers to connect to heterogeneous databases and managed other essential extensions.
- **MS SQL Server Administration:**
- Executed day-to-day administration of live SQL Servers, ensuring operational efficiency and stability.
- Actively participated in Live Primary Recovery (PR) and Disaster Recovery (DR) activities, including mock drills for new releases.
- Configured Linked Servers, Transactional Replication, and various maintenance tasks such as database backup & restore, recovery, scheduled jobs, and maintenance plans.
- Installed and configured SQL Server 2014 and 2017 in standalone and SQL Cluster server environments.
- Maintained robust database security by providing appropriate SQL roles, logins, and permissions as per user demand.
- Collaborated with application teams on rollouts, issue resolution, and SQL Server migrations.
- Managed production systems with high proficiency, consistently meeting client requirements.
- Performed SQL Server service pack upgrades and applied hot fixes to maintain system integrity.
- Handled multiple SQL Instances on Windows SQL Cluster environments built on EMC SAN.
- Worked extensively with MSSQL DB clusters, including active/active and active/passive configurations, Always-On Availability Groups (AAG), and HA/DR setups.
- Leveraged expertise in SAN and RAID levels to build and support SQL Cluster servers on SAN Environments.

## **Skills**

---

**DB Languages:** SQL

**Database Tools:** SQL Server 2014/2017, PostgreSQL 9.5, 9.6, Oracle 11gR2

**Operating Systems:** Redhat Linux, Oracle Linux, Windows Server 2012/2016

**Oracle Technologies:** Database Software Installation, DBCA (GUI/Silent), Architecture, File/Space/User Management, Roles & Privileges, Control files, Redolog, Archive/Undo Management, Listener/Tnsnames Configuration, AWR/ADDM/ASH Reports, RMAN Backup/Cloning/Duplicate, Flashback Technologies, Expdp/Impdp, Oracle 11gR2 RAC (Installation, Configuration, Node Management, CRSCTL, SRVCTL), Data Guard, Database Upgrades (11.2.0.1 to 11.2.0.4), PSU Patching (O patch)

**Soft Skills:** Communication, Self-confidence, Adaptability, Leadership, Teamwork, Active Listening, Quick Learning, Problem Solving
