Education

PDACOE, Gulbarga, Autonomous Institution

B. Tech Computer Science

CGPA: 3.86

2012, Gulbarga, India

Experience

Database Administrator III

On-Site

BNY Mellon International Operations (India) PVT. LTD

Jan 2014 - Dec 2015, Bengaluru, India

- Installed and configured database servers using slipstream, setting up maintenance jobs as per standard policy on standalone and cluster environments with latest service packs.
- Installed SSRS, uploaded .rdls, assigned correct data sources to reports, and granted necessary access to users & developers on the reporting website. Familiar with SSIS and designing packages.
- Created and managed logins, users for database applications, assigned permissions as per requests, and resolved user login issues.
- Migrated all SQL Server 2005/2008 servers to higher versions.
- Set up database refresh jobs on QA, DEV, and UAT environments and fixed orphaned users.
- Troubleshooted performance-related issues.
- Participated in multiple projects, providing all required support for testing in QA, UAT & DEV environments.
- Led DR (Disaster Recovery) tests for the database team.
- Participated in database purge and archive activities.
- Wrote codes for automating database administration tasks.
- Automated DR tasks to start agent jobs on multiple servers and restore databases for log-shipped databases without manual intervention for online databases post DR activities.
- Provided support to vendor databases, followed up with vendor calls, and timely escalated to the next level when no updates were received within predefined timelines.
- Installed and configured SMSQL on Windows Server. Scheduled jobs for creation and deletion of clones on SQL Server and maintained backups using SMSQL.
- Installed and configured MongoDB server, created databases and collections.
- Created new users and granted access using Ops Manager, and monitored database servers using Ops Manager.
- Managed and maintained multiple instances of Oracle & Sybase Databases on Linux and Windows servers.
- Monitored daily jobs, including backups, refresh, and maintenance jobs for Oracle & Sybase.

Database Administrator

On-Site

Hewlett-Packard India Sales PVT. LTD. (via Softenger India PVT. LTD)

Jan 2012 - Dec 2013, Bengaluru, India

- Installed SQL Server on standalone and Windows cluster environments with latest service packs.
- Performed SQL Server installation using slipstream.
- Installed reporting services.
- Created logins and users, assigning permissions as per requests.
- Conducted security audits for all logins, including maintenance of unused and orphan user logins.
- Created & maintained daily and weekly jobs/maintenance plans including backup, index rebuild/reorganize, update statistics, and database consistency checks.
- Created linked servers and ensured connectivity between servers.
- Monitored disk space proactively & performed space management using data and log file shrinking.
- Monitored blocking, deadlocks, open transactions, and slow-running queries during performance issues, highlighting costly queries to developers.
- Configured alerts for deadlock and blocking to maintain performance.
- Implemented high availability technologies like log shipping, AlwaysOn, mirroring, and troubleshooting; also knowledgeable in replication.

- Successfully completed migration of databases from one server to another.
- Performed DR drills (Online/Offline) on a quarterly basis.
- Developed PowerShell scripts to monitor, restart SQL service, and get email alerts for service status.
- Maintained TNS entries for Oracle client as per client requests.
- Interacted with customers for requirements and provided status updates for handling issues and service requests at every stage of resolution.
- Managed proper escalation and notification matrix for all support levels.

Skills

Operating Systems: Microsoft Windows Server 2003 - 2008 - 2008 R2 - 2012

Database Technologies: SQL Server - Sybase ASE Server - Oracle - MongoDB

Monitoring & Ticketing: HP Service Manager 7.0/9.0 - Solar Winds DPA - JIRA - MongoDB OPS Manager

Web Servers: IIS 7.0

Database Tools: SSMS - DBArtisan - Studio 3T - SnapShot Manager for SQL Server

Scripting: PowerShell

High Availability: Log Shipping - AlwaysOn - Mirroring - Replication
