

Mostafa Ismail

Hadoop Developer

mostafa.ismail@email.com | +20 100 123 4567 |  github.com/mostafa-ismail |  linkedin.com/in/mostafa-ismail | mostafaismail.com

Education

Medi-caps Institute of Technology & Management

B.E. Electronics & Communication

CGPA: N/A

Indore, Madhya Pradesh, India

Experience

Hadoop Developer

Tata Consultancy Services

Full-time

August 2015 – February 2018

- **Project: Data Lake Program**
- Developed a proactive Health Check utility for Data Lake, ensuring smooth functioning of all Hadoop components on the cluster and sending results to email in HTML format; utilized for daily health checks and after upgrades.
- Processed and filtered data in various formats within the Hadoop ecosystem using appropriate techniques.
- Developed a data pipeline utility to ingest data from RDBMS databases to Hive external tables using Sqoop commands, including row count validation for data quality checks.
- Developed and automated various cluster health check, usage, and capacity-related reports using Unix shell scripting.
- Optimized Hive queries to enhance performance and minimize Hadoop resource utilization.
- Created Flume agents to process data into the Hadoop ecosystem.
- Performed benchmark testing on Hive and Impala queries.
- Involved in setting up the Hadoop cluster and its components (e.g., edge node) and implemented High Availability (HA) for services such as Hive Server2, Impala, and HDFS.
- Filtered required data from available datasets using technologies like Pig and Regex Serde.
- Conducted Dataiku benchmark testing on Impala and Hive in comparison to Greenplum database.
- Migrated data from Greenplum database to Hadoop using Sqoop pipelines, processed the data, and stored it in Hive tables for performance testing.
- Addressed Hadoop ecosystem-related issues to provide stability to the WM Hadoop ecosystem.
- Rescheduled jobs from Autosys to TWS job hosting for improved performance.
- **Project: ABSA- Reconciliations, UBC and WMDATALAKE COE**
- Optimized SQL queries for data not required to move from RDBMS to any other platform.
- Developed Hive queries and logic for data migration from RDBMS to the Hadoop ecosystem.
- Wrote Hive queries to analyze required data as per business requirements.
- Optimized Hive queries to increase performance and minimize Hadoop resource utilization.
- Developed Sqoop commands and scripts to move data from RDBMS to the Hadoop side.
- **Project: Intellimatch Recs Migration**
- Extracted business requirements, analyzed them, and implemented them in developing Recs.
- Migrated static setup of reconciliations from 8.1 version to 9.1 version of the Intellimatch environment.
- Performed back-end work, primarily involving writing SQL queries to provide data for new reconciliations.

Trainee (Initial Learning Program)

Tata Consultancy Services

Training

June 2015 – August 2015

- Participated in a comprehensive learning program for newly joined employees, focusing on organizational working standards, technical skills, and ethical aspects.

Skills

Programming Languages: Python - Shell Scripting - SQL - Scala - Unix

Big Data Technologies: Apache Hadoop - Hive - Pig - Sqoop - Flume - Oozie - Impala - HDFS - MapReduce - Spark

Tools: Dataiku - Unravel - Cloudera - Putty - HUE - Cloudera Manager - Eclipse - Resource Manager
