Education

Gujarat Technological University

Bachelors of Engineering

January 2016, Gujarat, India

Experience

Systems Engineer / Hadoop Developer

Full-time - On-site

Tata Consultancy Services

Jan 2018 - Jan 2020

- Contributed to a major big data analytics project for a premier American pharmaceutical company, managing vast United Healthcare data including patient records, medicine data, and treatment pathways.
- Managed a Hadoop cluster (CDH3, 20 TB, 10 Data Nodes + 3 Masters) for large-scale data processing and analytics.
- Developed and implemented proof-of-concepts for enterprise adoption of Hadoop technologies.
- Utilized Spark API over Cloudera Hadoop YARN to perform advanced analytics on healthcare datasets.
- Spearheaded cluster maintenance activities, including node management, monitoring, troubleshooting, data backups, and log file reviews.
- Efficiently imported and exported large datasets between HDFS and external systems using Sqoop.
- Developed and optimized Pig scripts and Hive Reports for data transformation and reporting.
- Implemented Hive partitioning and bucketing, creating external and internal tables for optimized data management.
- Developed Spark scripts using Scala shell, working with DataFrames, SQL, Datasets, RDDs, and MapReduce to optimize existing Hadoop algorithms.
- Collaborated cross-functionally with infrastructure, network, database, application, and BI teams to ensure data quality and availability.
- Generated reports using Tableau and facilitated data transfer to HDFS and Hive via Sqoop.
- Applied ORC & Parquet file formats for data serialization and Snappy for data compression.

Certificates

TCS Certified Hadoop Developer

Awards & Honors

Appreciation for showing articulate leadership qualities in doing work with the team.

Skills

Operating Systems: Linux (Ubuntu) - Windows 2007/08

Big Data Technologies: Hadoop - Spark - Sqoop - Hive - Flume - Pig

Tools & Databases: Tableau - SVN - Beyond Compare
