Education

Cairo University

B.Sc. in Computer Science

CGPA: 3.86

May 2018, Giza, Egypt

Experience

Hadoop Developer

INFOSYS

On-Site

June 2018 - May 2022

- **Project Description:** The banking information had stored the data in different data warehouse systems for each department but it becomes difficult for the organization to manage the data and to perform some analytics on the past data, so it is combined them into a single global repository in Hadoop for analysis.
- Analyzed the banking rates dataset.
- Created specification documents and provided effort estimations.
- Developed Spark Scala, Spark SQL Programs using Eclipse IDE on Windows/Linux environment.
- Created KPIs test scenarios, test cases, and test result documents.
- Tested Scala programs in Linux Spark Standalone mode.
- Setup multi-cluster on AWS, deployed Spark Scala programs.
- Provided solutions using the Hadoop ecosystem: HDFS, MapReduce, Pig, Hive, HBase, and Zookeeper.
- Provided solutions using large-scale server-side systems with distributed processing algorithms.
- Created reports for the BI team using Sqoop to export data into HDFS and Hive.
- Supported and assisted in troubleshooting and optimization of MapReduce jobs and Pig Latin scripts.
- Demonstrated deep understanding of Hadoop design principles, cluster connectivity, security, and factors affecting system performance.
- Worked on importing and exporting data from different databases like Oracle and Teradata into HDFS and Hive using Sqoop, TPT, and Connect Direct.
- Imported and exported data from RDBMS to HDFS/HBASE.
- Wrote client-side scripts to temporarily store data moved to HDFS and then load it into Hive tables.
- Developed Sqoop scripts for interaction between Pig and MySQL Database.
- Involved in developing Hive Reports and managing partitions of Hive tables.
- Created and maintained technical documentation for launching Hadoop Clusters and for executing Hive queries and Pig scripts.
- Ran Hadoop jobs for processing millions of records of text data.

Projects

Telecommunications Customer Churn Analysis & 360-Degree View

Jan 2021 - Dec 2021

- Identified customers likely to churn and created a 360-degree customer view from different heterogeneous data sources.
- Brought data into a data lake (HDFS) from various sources and analyzed using Hadoop tools like Pig and Hive.
- Installed and configured Apache Hadoop tools including Hive, Pig, HBase, and Sqoop for application development and unit testing.
- Wrote MapReduce jobs to discover trends in data usage by users.
- Involved in database connection using Sqoop.
- Created Hive tables, loaded data, and wrote Hive queries using HiveQL.
- Implemented partitioning and joining of Hive tables for Hive query optimization.
- Experienced in SQL DB migration to HDFS.
- Utilized NoSQL (HBase) for faster performance, maintaining data in a de-normalized way for OLTP.
- Collected data from distributed sources into Avro models, applied transformations and standardizations, and loaded into HBase for further processing.
- Defined job flows and used Oozie to orchestrate the workflow.
- Implemented Fair schedulers on the Job tracker to share cluster resources for MapReduce jobs.
- Exported analyzed data to relational databases using Hive for visualization and report generation for the BI team.

Skills

Programming Languages: Java, Scala, Python, Shell Scripting, PL/SQL

Big Data Technologies: Hadoop, HDFS, MapReduce, Spark, Pig, Hive, HBase, Sqoop, Flume, Oozie, Storm, Cloudera, Zookeeper

Databases: NoSQL, Oracle 10g, MySQL, Teradata

Tools & Platforms: Linux, Git, SVN, Eclipse IDE, Putty, Tomcat, IBM WebSphere v8.5, AWS
