

Marwa Abdel Aziz

Hadoop Developer

marwa.abdelaziz@email.com | +20 123 456 7890 |  github.com/marwa-abdel-aziz |  linkedin.com/in/marwa-abdel-aziz | marwaabdelaziz.com

Education

Medi-caps Institute of Technology & Management

B.E. Electronics & Communication

2015, Indore, Madhya Pradesh

Experience

Hadoop Developer

Full-time

Tata Consultancy Services

August 2015 - Present

- Developed proactive Health Check utility for Data Lake, monitoring Hadoop components and automating HTML email result delivery for daily checks and post-upgrade verification.
- Processed and filtered diverse data formats within the Hadoop ecosystem using appropriate techniques.
- Engineered a data pipeline utility to ingest data from RDBMS databases into Hive external tables via Sqoop commands, incorporating robust data quality checks like row count validation.
- Developed and automated various cluster health, usage, and capacity reports leveraging Unix shell scripting.
- Optimized Hive queries to significantly enhance performance and minimize Hadoop resource utilization.
- Created Flume agents to efficiently process and stream data into the Hadoop ecosystem.
- Conducted benchmark testing on both Hive and Impala queries to assess performance.
- Actively participated in setting up Hadoop clusters and critical components, including edge nodes and High Availability (HA) implementation for Hive Server2, Impala, and HDFS.
- Filtered specific data from available datasets using technologies such as Pig and Regex Serde.
- Performed Dataiku benchmark testing on Impala and Hive, comparing performance against a Greenplum database.
- Managed data migration from Greenplum database to Hadoop via Sqoop pipelines, processing and storing data in Hive tables for subsequent performance testing.
- Addressed and resolved Hadoop ecosystem-related issues to ensure the stability of the WM Hadoop ecosystem.
- Rescheduled jobs from Autosys to TWS job hosting to achieve improved performance.

Initial Learning Program Participant

Training

Tata Consultancy Services

June 2015 - August 2015

- Completed an intensive learning program designed for new hires, focusing on organizational working standards, technical proficiencies, and ethical guidelines.
- Groomed with various technical and ethical aspects crucial for professional growth within the organization.

Projects

ABSA- Reconciliations, UBC and WMDATALAKE COE

Tata Consultancy Services
Worked on migration from RDBMS databases to the Hadoop ecosystem (Hive), establishing a robust platform with strong data governance, lineage, auditing, and monitoring capabilities.

- Significantly accelerated data processing and analysis by moving data to Hadoop, overcoming RDBMS limitations for vast datasets and enabling quicker business decision-making.
- Optimized SQL queries for data that did not require migration to alternative platforms.
- Developed complex Hive queries and logical frameworks to facilitate efficient data movement from RDBMS to the Hadoop ecosystem.
- Wrote advanced Hive queries to analyze data effectively based on evolving business requirements.
- Enhanced performance and minimized Hadoop resource utilization through targeted optimization of Hive queries.
- Authored Sqoop commands and scripts to seamlessly transfer data from RDBMS to the Hadoop environment.

Intellimatch Reconciliation Setup Migration

Tata Consultancy Services
Worked on identifying and analyzing business requirements, subsequently implementing them to develop new reconciliations (Recs).

- Successfully migrated static reconciliation setups from Intellimatch version 8.1 to version 9.1.
- Executed backend tasks, primarily involving writing complex SQL queries to furnish necessary data for new reconciliation processes.

Skills

Programming Languages: Python - Shell Scripting - SQL - Scala

Big Data Technologies: Apache Hadoop - Hive - Pig - Sqoop - Flume - Oozie - Impala - HDFS - Spark - MapReduce

Tools & Platforms: Dataiku - Unravel - Cloudera - Putty - HUE - Cloudera Manager - Eclipse - Resource Manager - Unix
