Education

Medi-caps Institute of Technology & Management

B.E. in Electronics & Communication

2011 - 2015, Indore, Madhya Pradesh, India

Experience

Hadoop Developer / Data Engineer

Full-time

Tata Consultancy Services

August 2015 - March 2018, Cairo, Egypt

- **Project: Data Lake Program (Data Warehouse Division)**

- * Developed proactive Health Check utility for Data Lake, ensuring smooth functioning of all Hadoop components and sending results via email in HTML format. Utilized for daily health checks and post-upgrade validations.
- * Processed data in various formats within the Hadoop ecosystem after filtering using appropriate techniques.
- * Developed data pipeline utility to ingest data from RDBMS databases to Hive external tables using Sqoop commands, including row count validation for data quality.
- * Developed and automated various cluster health check, usage, and capacity-related reports using Unix shell scripting.
- * Optimized Hive queries to increase performance and minimize Hadoop resource utilization.
- * Created Flume agents for real-time data processing into the Hadoop ecosystem.
- * Performed benchmark testing on Hive Queries and Impala queries.
- * Involved in setting up the Hadoop cluster and its components, including edge node configuration and High Availability (HA) implementation for services like Hive Server2, Impala, and HDFS.
- * Filtered required data from available datasets using different technologies like Pig and Regex Serde.
- * Conducted Dataiku benchmark testing on Impala and Hive, comparing performance against Greenplum database.

- * Migrated data from Greenplum database to Hadoop side using Sqoop pipelines, processed the data within Hadoop, and stored it into Hive tables for performance testing.
- * Addressed Hadoop ecosystem-related issues to ensure stability of the WM Hadoop ecosystem.
- * Rescheduled jobs from Autosys to TWS job hosting for better performance.

- **Project: ABSA- Reconciliations, UBC and WMDATALAKE COE (Clients: Barclays, Union Bank of California, Morgan Stanley)**

- * Optimized SQL queries for data that was not required to be moved from RDBMS to other platforms.
- * Developed Hive queries and logic to facilitate data migration from RDBMS to the Hadoop ecosystem.
- * Wrote Hive queries to analyze required data as per business requirements.
- * Optimized Hive queries to improve performance and minimize Hadoop resource utilization.
- * Developed Sqoop commands and scripts for efficient data transfer from RDBMS to Hadoop.

- **Project: Intellimatch Environment Migration (Reconciliations)**

- * Worked on extracting business requirements, analyzing, and implementing them in developing reconciliations (Recs).
- * Migrated static setup of reconciliations from Intellimatch version 8.1 to 9.1.
- * Performed backend development, primarily focusing on writing SQL queries to provide data for new reconciliations.

Initial Learning Program Participant

Training

Tata Consultancy Services

June 2015 - August 2015, Cairo, Egypt

- Participated in a comprehensive learning program designed for newly joined employees, focusing on organizational working standards, technical skills, and ethical aspects.

Skills

Programming Languages: Python, Shell Scripting, SQL, Scala

Big Data Frameworks/Tools: Apache Hadoop, Hive, Pig, Sqoop, Flume, Oozie, Impala, HDFS, MapReduce, Spark

Data Platforms/Tools: Dataiku, Unravel, Cloudera, HUE, Cloudera Manager, Resource Manager

Other Tools/OS: Putty, Eclipse, Unix
