

Sayed Nasser

Hadoop Developer

sayed.nasser@email.com | +20 101 234 5678 |  github.com/sayed-nasser |  linkedin.com/in/sayed-nasser | sayednasser.com

Education

Cairo University

CGPA: 3.86

Bachelor of Science in Computer Engineering

June 2020, Giza, Egypt

Relevant Courses: Hadoop Ecosystems - Distributed Systems - Data Structures & Algorithms - Database Management Systems - Programming with Java & Scala

Experience

Hadoop Developer

Full-time - On-site

Infosys

Jan 2021 - Present, Cairo, Egypt

- Analyzed banking rates dataset, created specification documents, and provided effort estimations.
- Developed SPARK Scala and SPARK SQL programs utilizing Eclipse IDE in Windows/Linux environments.
- Created KPIs test scenarios, test cases, and test result documents; tested Scala programs in Linux Spark Standalone mode.
- Set up multi-cluster on AWS and deployed Spark Scala programs.
- Provided solutions using the Hadoop ecosystem including HDFS, MapReduce, Pig, Hive, HBase, and Zookeeper.
- Contributed to large-scale server-side systems with distributed processing algorithms.
- Generated reports for the BI team by exporting data into HDFS and Hive using Sqoop.
- Supported and assisted in troubleshooting and optimization of MapReduce jobs and Pig Latin scripts.
- Applied deep understanding of Hadoop design principles, cluster connectivity, security, and performance factors.
- Imported and exported data from various databases like Oracle and Teradata into HDFS and Hive using Sqoop, TPT, and Connect Direct.
- Managed data import and export from RDBMS to HDFS/HBASE.
- Wrote client-side scripts to temporarily store data in HDFS before loading it into Hive tables.
- Developed Sqoop scripts for interaction between Pig and MySQL Database.
- Involved in developing Hive Reports and managing partitions of Hive tables.
- Created and maintained technical documentation for launching HADOOP Clusters and executing HIVE queries and PIG scripts.
- Executed Hadoop jobs for processing millions of records of text data.

Projects

TELECOMMUNICATIONS Project

May 2020 - Dec 2020

- Developed a 360-degree customer view by integrating data from heterogeneous sources into a data lake (HDFS).
- Analyzed customer data using Hadoop tools (Pig, Hive) to identify churn likelihood.
- Installed and configured Apache Hadoop tools including Hive, Pig, HBase, and Sqoop for application development and unit testing.
- Wrote MapReduce jobs to discover trends in user data usage.
- Established database connections using SQOOP.
- Created Hive tables, loaded data, and developed HiveQL queries.
- Optimized Hive query performance through partitioning and joining Hive tables.
- Managed SQL DB Migration to HDFS.
- Utilized NoSQL (HBase) for faster performance, maintaining data in a de-normalized format for OLTP.
- Collected data from distributed sources into Avro models, applied transformations, standardized, and loaded into HBase.
- Defined and orchestrated job flows using Oozie.
- Implemented Fair schedulers on the Job tracker to ensure equitable resource sharing for MapReduce jobs.
- Exported analyzed data to relational databases via HIVE for visualization and BI team report generation.

Skills

Programming Languages: Java - Scala - Python - Shell Scripting - PL/SQL - SQLPLUS

Big Data & Cloud: Hadoop (HDFS, MapReduce, Pig, Hive, Sqoop, Flume, Oozie) - HBase - Spark - Storm - Cloudera - AWS

Databases: Oracle 10g - MySQL - NoSQL

Tools & OS: Eclipse IDE - Tomcat - Putty - SVN - GitHub - IBM WebSphere v8.5 - Linux - Windows
