

Sayed Farouk

Talend ETL Developer

sayed.farouk@email.com | +20 101 234 5678 |  github.com/sayed-farouk |  linkedin.com/in/sayed-farouk | sayedfarouk.com

Education

University of Mumbai

Bachelor of Engineering (BE)

January 2012 - January 2016, Mumbai, India

Experience

Talend ETL Developer

Full-time

Tata Consultancy Services (TCS)

June 2016 - May 2018, Cairo, Egypt

- Prepared ETL mapping Documents and Data Migration documents for seamless project transfer from development to production.
- Performed Unit and System testing to validate data loads, troubleshooting and fixing long-running jobs.
- Utilized Talend Big Data components (e.g., tJDBCConfiguration, tHDFSConfiguration, tS3configuration, tCacheOut, tCacheIn, tSqlRow) and standard components (e.g., tFileInputDelimited, tMap, tJoin, tAggregate, tFilter) for complex mappings.
- Applied ETL methodologies and best practices to develop Talend ETL jobs, adhering to and enhancing programming standards.
- Developed and deployed physical objects including custom tables, views, stored procedures, and indexes to SQL Server for Staging and Data-Warehouse environments, including writing SQL queries and using Joins.
- Managed Source to Target mapping documents for Fact and Dimension tables, with experience in performance tuning Talend Integration Suite mappings.
- Proficiently used tMap for lookup & Joiner Functions and writing expressions; handled insert and update strategies with tSQLRow.
- Created Implicit, local, and global Context variables for running Talend jobs across different environments.
- Worked with Talend Administration Console (TAC) for job scheduling and user management; built Talend jobs both in Studio and on TAC server.
- Developed mappings for loading Fact and Dimension tables, including SCD Type 1, SCD Type 2, and incremental loading, followed by unit testing.
- Designed a Framework Integrated Job to schedule multiple jobs, update run times and status, send failure notifications, and maintain counts in SQL Database.
- Improved job performance using tParallelize component and multi-thread execution for parallel subjob execution.
- Implemented FTP operations using Talend Studio (e.g., tFileList, tS3Put, tFTPput, tFileExist, tFTPConnection) to transfer files between network folders and FTP servers.
- Extracted data from flat files/databases, applied business logic, and loaded into staging databases and flat files.
- Loaded data into various targets from diverse sources like SQL Database, DB2, Flatfiles, and XML files into staging and target databases.
- Designed and developed ETL solutions (Extract, Transform, Load) using TALEND Big Data Platform for data transformations and processing.
- Gained excellent working experience in Agile methodologies.
- Proficiently translated client requirements into technical specifications for ETL solutions.
- Designed and developed end-to-end ETL processes from source systems to staging and then to Data Warehouse, documenting business, functional, and data requirements, context/variable diagrams, and use cases.
- Collaborated effectively with onsite and remote teams using strong oral and written communication skills.
- Demonstrated strong problem-solving ability, time management, and a proactive approach to prioritizing work and meeting deadlines.

Skills

ETL Big Data: Talend Big Data - Informatica PowerCenter - Talend Administration Console (TAC) - Data Integration

Databases SQL: Microsoft SQL Server - SQL (Platform 6.2.1 Management Studio Workbench) - Redshift - Data Modeling (Microsoft Access) - MySQL

Data Warehousing: Data Warehouse Concepts (Star Schema, Facts, Dimensions)

Cloud Platforms: AWS Services (Athena, S3)

Development Tools: Microsoft Visual Studio
