

Eslam Hassan

Talend ETL Developer

eslam.hassan@email.com | +20 100 123 4567 |  github.com/eslam-hassan |  linkedin.com/in/eslam-hassan | eslamhassan.com

Education

University of Mumbai

CGPA: 3.86

Bachelor of Engineering (BE)

January 2012 - January 2016, Mumbai, India

Experience

Talend ETL Developer

Full-time

Tata Consultancy Services

Jan 2022 - Dec 2023, Cairo, Egypt

- Spearheaded the preparation of ETL mapping and data migration documents, ensuring seamless project transfers from development to testing and production environments.
- Executed rigorous Unit and System testing to validate data loads in target systems, guaranteeing data integrity and accuracy.
- Diagnosed and resolved issues in long-running jobs, enhancing ETL process efficiency and system stability.
- Developed complex ETL mappings using Talend Big Data components (e.g., tJDBCConfiguration, tHDFSConfiguration, tS3Configuration) and standard components (tMap, tJoin, tReplicate, tParallelize, tAggregate).
- Implemented and optimized ETL methodologies and best practices, adhering to programming standards and creating reusable Joblets.
- Utilized tRunJob to manage parent-child job dependencies and parameter passing, improving modularity of ETL processes.
- Designed and deployed physical database objects, including custom tables, views, stored procedures, and indexes in SQL Server for staging and data warehousing.
- Wrote advanced SQL queries and employed various join techniques to efficiently retrieve and manipulate data from MySQL and other relational databases.
- Managed Source to Target mapping documents for Fact and Dimension tables, ensuring comprehensive data lineage and quality.
- Applied extensive experience in Talend Integration Suite for broad design, development, and testing, including performance tuning of mappings.
- Leveraged tMap for advanced lookup and join functionalities, incorporating complex expressions to meet diverse business requirements and managing insert/update strategies via tSQLRow.
- Configured implicit, local, and global Context variables to facilitate execution of Talend jobs across multiple environments.
- Managed job scheduling and user access via Talend Administration Console (TAC), and proficiently built Talend jobs both within the studio and on the TAC server.
- Developed mappings for loading Fact and Dimension tables, implementing SCD Type 1 and Type 2 dimensions, and incremental loading mechanisms.
- Engineered a Framework Integrated Job for scheduling multiple jobs, tracking run times, sending failure notifications, and maintaining database counts.
- Enhanced job performance through parallel subjob execution using the tParallelize component and multi-thread options.
- Automated file transfers between servers using Talend FTP components (tFileList, tS3Put, tFTPput), streamlining data movement workflows.
- Extracted, transformed, and loaded data from diverse sources (flat files, databases, XML) into staging and target databases, applying intricate business logic.
- Applied excellent working knowledge of Agile methodologies, contributing to efficient and iterative project development and delivery.
- Effectively gathered and translated client business requirements into precise technical specifications for ETL solutions.
- Designed and developed end-to-end ETL processes from various source systems to data warehouses, documenting all functional and data requirements.

- Demonstrated strong oral and written communication skills, fostering effective collaboration with local and remote teams.
- Proven team player with exceptional problem-solving abilities and time management skills, consistently meeting critical deadlines.

Skills

Data Warehousing & ETL: Talend Big Data - Informatica PowerCenter - Talend Administration Console (TAC) - Data Warehouse Concepts (Star Schema, Facts, Dimensions) - Data Integration - Data Modeling (Microsoft Access)

Databases & SQL: Microsoft SQL Server - SQL Platform 6.2.1 Management Studio Workbench - Redshift - SQL - MySQL - DB2

Cloud Services: AWS Services - Athena - S3

Programming & Tools: Microsoft Visual Studio - FTP - XML

Methodologies: Agile
